DETAILED ACTION

Election/Restriction

Claims 6-13 and 18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b),

as being drawn to a nonelected Group, there being no allowable generic or linking claim. Applicant

timely traversed the restriction (election) requirement in Paper No. 6.

Applicant's election with traverse of Group I (referring to claims 1-5 and 14-17) in Paper No.

6 is acknowledged. The traversal is on the ground(s) that it is unclear how a bone block created in

a laboratory or donated by another patient would encompass the current implant which comprises

"one or more tendon portions and one or more bone portions.". This is not found persuasive because

as discloses in the independent claims 6, and 9 of the above application, the excising of the bone

blocks do not need to be attached to a specific tendon. It is well known in the art the removal of

bone blocks, tendon and then combining those part to each other by sutures or adhesive in order to

be implanted into the human body. Therefore, there are different method of making the bone graft

and the ligament. Regarding claim 18, it is well known in the art the use of different tools in order

to remove bone from a patient.

The requirement is still deemed proper and is therefore made FINAL.

Art Unit: 3738

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Claims 1, and 14-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Simon et al US Patent 5,951,560.

Simon et al discloses a plurality of bone blocks (49 & 53) shaped into a dowel or taper and attached to a tendon in a first and second ends (see Fig. 33).

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Beck, Jr. et al US Patent 5,961,520.

Beck, Jr. et al discloses at least one bone block made of metal shaped into a dowel. The block is attached to a tendon at a first end (see Figs. 1-3 and 6).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/528,034

Art Unit: 3738

Claims 2-5 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simon et

al US Patent 5,951,560 in view of McGuire US Patent 5,562,669.

Simon et al discloses the invention substantially as claimed. However, Simon et al does not

disclose a tendon bone graft derived from a patellar tendon, a groove and at least one graft

manipulation hole.

McGuire teaches a tendon bone graft derived from a patellar tendon, a groove and at least one

graft manipulation hole for the purpose of maintain the patency of the whole system (see Figs. 4a, 4b,

5 and 6; col. 1, lines 17-20 and lines 31-53).

It would have been obvious to one having ordinary skill in the art at the time the invention was

made to modify the bone blocks and graft properties of the Simon et al reference with the teaching

of the McGuire reference in order to increase the biocompatibility of the devices inside the human

body and maintain the patency of the bone joint.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Exr. Alvin Stewart whose telephone number is (703) 305-0277. The examiner

can normally be reached on Monday-Friday from 7:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Corrine McDermott, can be reached on (703)308-2111. The fax phone number for the organization

where this application or proceeding is assigned is (703) 305-3590.
